

Query - Usage

Reference
Service: Cost Management
API Version: 2023-03-01

Query the usage data for scope defined.

HTTP
POST https://management.azure.com/{scope}/providers/Microsoft.CostManagement/query?api-version=2023-03-01

URI Parameters

Name	In	Required	Type	Description
scope	path	True	string	The scope associated with query and export operations. This includes '/subscriptions/{subscriptionId}/' for subscription scope, '/subscriptions/{subscriptionId}/resourceGroups/{resourceGroupName}' for resourceGroup scope, '/providers/Microsoft.Billing/billingAccounts/{billingAccountId}' for Billing Account scope and '/providers/Microsoft.Billing/billingAccounts/{billingAccountId}/departments/{departmentId}' for Department scope, '/providers/Microsoft.Billing/billingAccounts/{billingAccountId}/enrollmentAccounts/{enrollmentAccountId}' for EnrollmentAccount scope, '/providers/Microsoft.Management/managementGroups/{managementGroupId}' for ManagementGroup scope, '/providers/Microsoft.Billing/billingAccounts/{billingAccountId}/billingProfiles/{billingProfileId}' for BillingProfile scope, '/providers/Microsoft.Billing/billingAccounts/{billingAccountId}/billingProfiles/{billingProfileId}/invoiceSections/{invoiceSectionId}' for invoiceSection scope, and '/providers/Microsoft.Billing/billingAccounts/{billingAccountId}/customers/{customerId}' for customer scope.
api-version	query	True	string	The API version to use for this operation.

Request Body

Name	Required	Type	Description
dataset	True	QueryDataset	Has definition for data in this query.
timeframe	True	TimeframeType	The time frame for pulling data for the query. If custom, then a specific time period must be provided.
type	True	ExportType	The type of the query.
timePeriod		QueryTimePeriod	Has time period for pulling data for the query.

Responses

Name	Type	Description
200 OK	QueryResult	OK. The request has succeeded.
204 No Content		No Content. Resource is not available.
Other Status	ErrorResponse	Error response describing why the operation failed.

Security

azure_auth

Azure Active Directory OAuth2 Flow.

Type: oauth2
Flow: implicit
Authorization URL: <https://login.microsoftonline.com/common/oauth2/authorize>

Scopes

Name	Description
user_impersonation	impersonate your user account

Definitions

Name	Description
------	-------------

ErrorDetails	The details of the error.
ErrorResponse	<p>Error response indicates that the service is not able to process the incoming request. The reason is provided in the error message.</p> <p>Some Error responses:</p> <p>429 TooManyRequests - Request is throttled. Retry after waiting for the time specified in the "x-ms-ratelimit-microsoft.consumption-retry-after" header.</p> <p>503 ServiceUnavailable - Service is temporarily unavailable. Retry after waiting for the time specified in the "Retry-After" header.</p>
ExportType	The type of the query.
FunctionType	The name of the aggregation function to use.
GranularityType	The granularity of rows in the forecast.
QueryAggregation	The aggregation expression to be used in the query.
QueryColumn	QueryColumn properties
QueryColumnType	The type of the column in the export.
QueryComparisonExpression	The comparison expression to be used in the query.
QueryDataset	The definition of data present in the query.
QueryDatasetConfiguration	The configuration of dataset in the query.
QueryDefinition	The definition of a query.
QueryFilter	The filter expression to be used in the export.
QueryGrouping	The group by expression to be used in the query.
QueryOperatorType	The operator to use for comparison.
QueryResult	Result of query. It contains all columns listed under groupings and aggregation.
QueryTimePeriod	The start and end date for pulling data for the query.
TimeframeType	The time frame for pulling data for the query. If custom, then a specific time period must be provided.

ErrorDetails

The details of the error.

Name	Type	Description
code	string	Error code.
message	string	Error message indicating why the operation failed.

ErrorResponse

Error response indicates that the service is not able to process the incoming request. The reason is provided in the error message.

Some Error responses:

429 TooManyRequests - Request is throttled. Retry after waiting for the time specified in the "x-ms-ratelimit-microsoft.consumption-retry-after" header.

503 ServiceUnavailable - Service is temporarily unavailable. Retry after waiting for the time specified in the "Retry-After" header.

Name	Type	Description
error	ErrorDetails	The details of the error.

ExportType

The type of the query.

Name	Type	Description
ActualCost	string	
AmortizedCost	string	
Usage	string	

FunctionType

The name of the aggregation function to use.

Name	Type	Description
Sum	string	

GranularityType

The granularity of rows in the forecast.

Name	Type	Description
Daily	string	

QueryAggregation

The aggregation expression to be used in the query.

Name	Type	Description
function	FunctionType	The name of the aggregation function to use.
name	string	The name of the column to aggregate.

QueryColumn

QueryColumn properties

Name	Type	Description
name	string	The name of column.
type	string	The type of column.

QueryColumnType

The type of the column in the export.

Name	Type	Description
Dimension	string	The dimension of cost data.
TagKey	string	The tag associated with the cost data.

QueryComparisonExpression

The comparison expression to be used in the query.

Name	Type	Description
name	string	The name of the column to use in comparison.
operator	QueryOperator Type	The operator to use for comparison.
values	string[]	Array of values to use for comparison

QueryDataset

The definition of data present in the query.

Name	Type	Description
aggregation	<string, QueryAggregation >	Dictionary of aggregation expression to use in the query. The key of each item in the dictionary is the alias for the aggregated column. Query can have up to 2 aggregation clauses.
configuration	QueryDatasetConfiguration	Has configuration information for the data in the export. The configuration will be ignored if aggregation and grouping are provided.
filter	QueryFilter	The filter expression to use in the query. Please reference our Query API REST documentation for how to properly format the filter.
granularity	GranularityType	The granularity of rows in the query.
grouping	QueryGrouping []	Array of group by expression to use in the query. Query can have up to 2 group by clauses.

QueryDatasetConfiguration

The configuration of dataset in the query.

Name	Type	Description
columns	string[]	Array of column names to be included in the query. Any valid query column name is allowed. If not provided, then query includes all columns.

QueryDefinition

The definition of a query.

Name	Type	Description
dataset	QueryDataset	Has definition for data in this query.
timePeriod	QueryTimePeriod	Has time period for pulling data for the query.
timeframe	TimeframeType	The time frame for pulling data for the query. If custom, then a specific time period must be provided.
type	ExportType	The type of the query.

QueryFilter

The filter expression to be used in the export.

Name	Type	Description
and	QueryFilter[]	The logical "AND" expression. Must have at least 2 items.
dimensions	QueryComparisonExpression	Has comparison expression for a dimension
or	QueryFilter[]	The logical "OR" expression. Must have at least 2 items.
tags	QueryComparisonExpression	Has comparison expression for a tag

QueryGrouping

The group by expression to be used in the query.

Name	Type	Description
name	string	The name of the column to group.
type	QueryColumnType	Has type of the column to group.

QueryOperatorType

The operator to use for comparison.

Name	Type	Description
In	string	

QueryResult

Result of query. It contains all columns listed under groupings and aggregation.

Name	Type	Description
eTag	string	ETag of the resource.
id	string	Resource Id.
location	string	Location of the resource.
name	string	Resource name.
properties.columns	QueryColumn[]	Array of columns
properties.nextLink	string	The link (url) to the next page of results.
properties.rows	array[]	Array of rows
sku	string	SKU of the resource.
tags	object	Resource tags.
type	string	Resource type.

QueryTimePeriod

The start and end date for pulling data for the query.

Name	Type	Description
from	string	The start date to pull data from.
to	string	The end date to pull data to.

TimeframeType

The time frame for pulling data for the query. If custom, then a specific time period must be provided.

Name	Type	Description
BillingMonthToDate	string	
Custom	string	
MonthToDate	string	

TheLastBillingMonth	string
TheLastMonth	string
WeekToDate	string
